Project Name	Credit Card Approval Prediction
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.no	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / dependency file	Yes
4	Database schema / seed files (if applicable)	NA
5	Environment configuration file	Yes
6	Deployed application URL (if hosted) / Pushed on github	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes

10	Demo video or walkthrough (if required)	Yes
----	---	-----

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
credit-card-approval-prediction/
|— application_record.csv
|— credit_record.csv
|— credit_model.pkl
|— scaler.pkl
|— feature_names.pkl
|— requirements.txt
|— README.md
|— main.ipynb
|— gradio_app.py
|— test_results/
|  └─ performance_testing.pdf
└─ screenshots/
    └─ demo_screenshots.png
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://817d888f441574922f.gradio.live/
Login Credentials (Demo)	Not Required
Platform / Hosting Provider	Google Colab + Gradio
Repository Link	Manish-077/Credit-Card-approval-prediction: This is the final internship project of SmartBridge
Demo Video Link	https://drive.google.com/file/d/1Dj7pB04mdAa7l9AervwV1LxpN37QLV1b/view?usp=sharing

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Provide these steps

1. Open Google Colab.
2. Upload application_record.csv and credit_record.csv.
3. Install required libraries using pip install -r requirements.txt.
4. Run all notebook cells sequentially.
5. The Random Forest model will be trained automatically.
6. Run the Gradio interface cell.
7. Open the generated public URL.
8. Enter applicant details and click Predict Approval.
9. View the approval or rejection result instantly.

Step 5: Known Issues / Limitations

S.no	Known Issue / Limitation	Workaround / Status
1	Gradio public URL changes after restart	Regenerate new share link
2	Model accuracy affected by class imbalance	Future improvement using SMOTE
3	Requires internet connection for Google Colab	Can be deployed on local machine
